Unrecorded Alcohol Consumption among Alcohol Dependent Patients

Published On: February 18, 2015 | Pages: 015 - 019

Author(s): Razvodovsky YE*

Introduction: Experts estimate that unrecorded alcohol makes up a significant share (about 25%) of all alcohol consumed in the former Soviet Republic Belarus. However, our knowledge with respect to the prevalence of the consumption of unrecorded alcohol in this country, as well as the patterns and motives of its consumption remains fragmented. ...

A Discussion about Modalities of Smoking Cessation in Perioperative Phase for Addicts: A Review Article

Published On: January 02, 2015 | Pages: 004 - 008

Author(s): Dhiman Adhikari, Sandeep Kumar Kar*, Rajat Choudhuri, Anupam Goswami, Chaitali Sen Dasgupta

Cigarette smoking is a worldwide healthcare problem of modern age. It is a leading cause of death, mainly in male population. Excess deaths among smokers, as compared to non smokers, are chiefly due to tuberculosis and respiratory, cardiovascular or malignant diseases. Smoking significantly increases intraoperative and postoperative complications in a person undergoin ...

Reward Deficiency Solution System (RDS): A Tale of Three Scientists

Published On: January 04, 2015 | Pages: 011 - 014

Author(s): Kenneth Blum*, Rajendra D Badgaiyan, Mark S Gold

Prior to 1990 there was a paucity of studies directed at psychiatric genetics and in fact there was only one study by Egeland et al. [1]. whereby an analysis of the segregation of restriction fragment length polymorphisms (RFLP) in an Old Order Amish population (pedigree) localized a dominant gene linked to a strong predisposition to manic depressive disease to chromo ...

Addiction in Anaesthesiologists and its Implications on Anaesthesia

Published On: January 03, 2015 | Pages: 009 - 010

Author(s): Nishkarsh Gupta*, Rakesh Garg, Anju Gupta

The problem of addiction and substance abuse among physicians has been reported as early as 1869 [1]. But, medical community is generally reluctant to accept and report the problem of addiction among health care professionals. Anaesthesiologist by virtue of their work profile and easy accessibility of potentially addicting drugs are at an increased risk of drug addict ...

Alcohol and Suicide in Eastern Europe

Published On: January 01, 2015 | Pages: 001 - 003

Author(s): Y E Razvodovsky*

Suicide is one of the leading external causes of death in many countries and its burden is expected to be rising [1]. There are a number of possible reasons responsible for this including lessened social integration, increase in psychiatric disorders, alcohol and drug abuse [2,3]. Alcohol consumption and suicides rates in Eastern Europe (EE) are among the highest in th ...
